### Technical Data

Type:	PVA dispersion
Color:	White
Density:	Approx. 1,3 kg/l
Solids Content:	Approx. 70% by volume
Application Method	Apply with a notched trowel
Thinner / Cleaning Agent	Water. Wet glue and tools can be cleaned with soap and water. Dried glue can be removed with rubbing alcohol.
Recommended Coverage:	Approx. 4-6 m <sup>2</sup> /liter, depending on the substrate
Minimum Application Temperature	Minimum +18°C in the air and on the surface

### Preparation

The surface must be clean and dry. Any unevenness should be filled and sanded before applying the glue.

### Usage Instructions

Stir well before use. Follow the instructions from the manufacturer of the floor or wall covering. Apply the glue with a notched trowel, using a glue bead height of approximately 2-3 mm. For absorbent substrates, the covering should be applied within 30 minutes on wet glue. For non-absorbent surfaces and wall applications, allow the glue to dry for 45–80 minutes until it no longer feels wet to the touch before applying the covering. Ensure the covering is pressed firmly onto the surface, and that air is squeezed out.

### Storage

Seal the lid tightly when storing the glue to prevent spills and drying out. Store and transport upright, frost-free, and preferably not below +10°C.

### Waste Disposal

Liquid glue and wash water should not be poured into drains or released into nature. They should be delivered to an approved hazardous waste collection point. Empty, clean, and dry plastic packaging without handles can be disposed of as plastic waste.

---

**Additional Information**

Stir well before use. Wet glue and tools can be washed with soap and water. Dried glue can be removed mechanically or with rubbing alcohol.  
Packaging Sizes: 1 and 5 liters

---

**Safety**

Refer to the dedicated safety data sheet. Read the information on the packaging.
